

CyberSafe

Bar Wallrath

1. Project Overview

CyberSafe is a modern, responsive one-page website designed to raise awareness about essential cybersecurity practices. The project focuses on presenting key digital security concepts in a clear, structured, and visually professional way.

The website includes educational sections about:

- Phishing attacks
- Strong password creation
- Two-Factor Authentication (2FA)

The goal was to build a clean, organized interface while applying proper HTML structure and CSS styling principles.

2. Project Objective

The objectives of this project were:

- To create a professional one-page website using HTML and CSS
- To demonstrate understanding of layout design (Flexbox)
- To organize content clearly and logically
- To implement responsive design for different screen sizes
- To separate structure (HTML) from styling (CSS) properly

3. Technologies Used

- **HTML5** – Page structure
- **CSS3** – Styling and layout
- **Flexbox** – Responsive section alignment

- **Git & GitHub** – Version control and deployment

4. Website Structure

The website contains:

Navigation Bar

- Clean horizontal navigation
- Smooth scrolling between sections

Hero Section

- Professional introduction banner
- Clear message: “Stay Safe Online”

Content Sections

Each topic is displayed using a split layout:

- Image on one side
- Text explanation on the other
- Alternating layout for visual balance

Footer

- Author credit
 - Clean minimal styling
-

5. Challenges & Solutions

During development, I encountered issues related to:

- Mixing CSS inside the HTML file
- Incorrect file structure for images
- Broken styling due to missing CSS links

To solve this, I:

- Rebuilt the project structure from scratch
- Properly separated HTML and CSS
- Organized images inside an /images folder
- Re-linked all files correctly

This process strengthened my understanding of proper project structure.

6. What I Learned

- The importance of clean structure in web development
- How to debug broken layouts
- How file paths affect image loading
- The value of rebuilding when necessary
- Better understanding of Flexbox layout
